

What does Claude.ai say about Saelig?

Saelig Company, Inc. is a niche electronics distributor based in Fairport, NY (near Rochester), founded in 1988 as a North American distributor sourcing unique test and measurement and control products and components for a wide variety of industries. It's a franchised distributor representing over 100 manufacturers and is the exclusive North American distributor for 45 of them, selling oscilloscopes, spectrum analyzers, logic analyzers, signal generators, and related electronic components and test equipment. On general reputation:

- Saelig markets itself around thousands of unique products, very competitive prices, friendly customer service, and free expert technical support. [contactout](#)
- Customer reviews on Shopper Approved (a third-party verified-purchase review platform) skew positive. Buyers frequently praise good prices and fast shipping — one reviewer called the service excellent, saying products were exactly as described and great quality, with the best prices they could find and delivery sooner than expected. There are occasional minor gripes (e.g., a case being "kind of bulky and barely large enough" for a phone, or a scope not including a screen protector), but no major recurring complaints in what I found. [shopperapprovedshopperapproved](#)
- Industry press coverage (Electropages, Aviation Pros, Military Aerospace publications) treats them as a legitimate, established supplier — they regularly get product-announcement coverage for new oscilloscopes, spectrum analyzers, and RF test gear, which suggests a solid standing in the T&M distribution niche.

Overall impression: a small, long-running (since 1988), specialty electronics/test-equipment distributor with a good reputation among engineers and hobbyists for sourcing hard-to-find gear at competitive prices with responsive support — not a household name but well regarded within its niche.
