

# Great endorsement for our PCB repair solution by UK's Defence Dept!

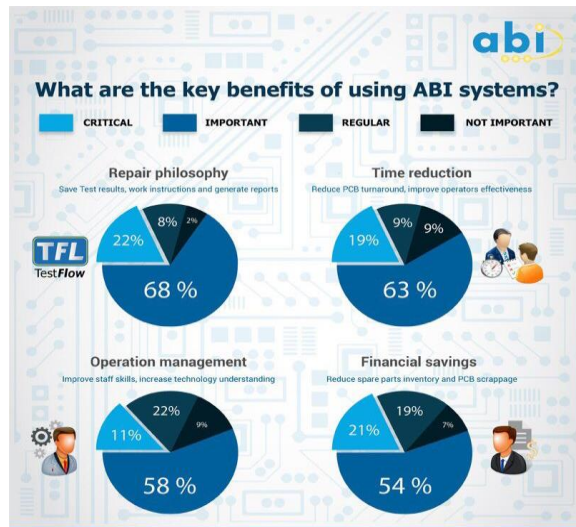

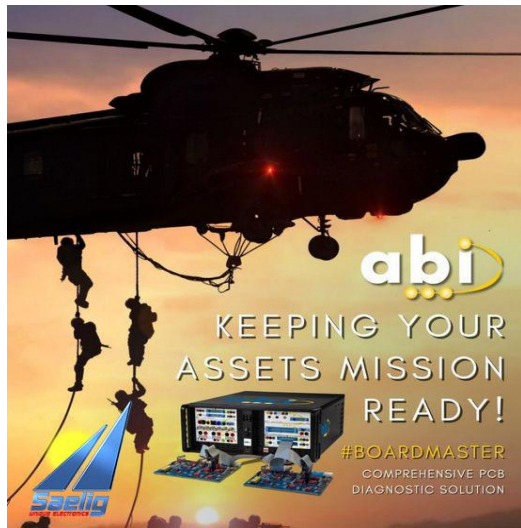

ELECTRONICS DIAGNOSTIC  
AND FAULT ANALYSIS

"The introduction of ABI's BoardMaster and RevEng platforms within Defence Equipment & Support and DECA has fundamentally strengthened our approach to electronic obsolescence management. By enabling structured, component-level diagnostics and reverse engineering in-house, we have recovered high-value assets that would otherwise have been subject to costly redesign due to obsolescence or external repair routes.

The scale of savings achieved across multiple programmes runs into the millions of pounds, but equally important is the preservation of technical knowledge and the protection of operational availability. This partnership has been instrumental in helping us extend platform life, improve sustainment resilience, and deliver measurable value to MoD."  
---Matt Darkin, Support Solution Specialist and Military Consultant at UK Ministry of Defence.
